

# Building Business Applications of LLMs and Generative Models

This course provides a hands-on introduction to Generative AI, enabling students to work directly with state-of-the-art LLMs and apply them to core business applications such as market research, advertising, AI search, and agents. The course uses cutting-edge LLMs, such as OpenAI's GPT models, through APIs and Python coding, giving students practical experience working directly with state-of-the-art systems. Students will leave with a deeper understanding of how AI works and its impact, along with the ability to communicate effectively with technical teams, assess feasibility and risk, and lead AI initiatives as early movers in the AI-driven economy.

**Spring 2026**

## Generative AI

Learn how modern Generative AI works, from core techniques to the broader ecosystem.

We will develop the ability to evaluate AI opportunities, lead AI initiatives, and communicate effectively with engineering teams.

## Building AI

Gain hands on experience building AI applications using OpenAI APIs and Python.

We will build AI systems for business use cases such as creative generation, content optimization, AI search, summarization tools, and agents.

## AI Ecosystem

An AI-driven economy is reshaping how value is created across industries and how firms compete.

We will explore the full AI ecosystem, from infra and model providers to applications, and assess the benefits, opportunities, and risks of AI adoption.
